ABHISHEK GUDALA

Software Engineer | Portfolio: Abhishek

• Sunnyvale, CA • +1 901 338 4522 • abhishek939us@gmail.com • linkedin.com/in/Abhishek

SUMMARY

Software Engineer with 5+ years of experience in full-stack development, specializing in Java, Spring Boot, React.js, GraphQL, and cloud-based application development across retail, financial services, and conversational AI domains. Experienced in building scalable REST APIs, optimizing database performance, automating CI/CD pipelines, and developing reliable distributed systems. Evaluated 200M+ stock-keeping units through rule-driven replenishment solutions, with expertise in cloud integration, application optimization, automated testing, and delivering efficient, customer-focused software solutions.

TECHNICAL SKILLS

- **Programming Languages:** Java, Python, C++, Ruby, JavaScript, C#, SQL
- **Frontend Technologies**: React.js
- **Backend Technologies:** Spring Boot, Spring Data JPA
- **API & Integrations**: GraphQL
- **Databases:** MySQL, PostgreSQL, MongoDB
- **Cloud Platforms & Services:** AWS, Google Cloud Platform, Microsoft Azure, AWS RDS, SQS, SNS, S3, EC2
- **DevOps & Infrastructure:** Docker, Kubernetes, Jenkins, CI/CD
- **Version Control & Development Tools:** Git
- **Messaging & Monitoring:** Kafka
- **Project Management & Collaboration:** SDLC, Agile, Scrum, Kanban

PROFESSIONAL EXPERIENCE

Walmart — Sunnyvale, CA
Software Engineer — February 2025 – Present

- Engineered a rule-driven replenishment alert feature to evaluate 200M+ stock-keeping units before buy calculations, identifying excess inventory and reducing overstock and markdown risk.
- Developed and maintained the AEX Dashboard consumer and service, managing Kafka producers, consumers, certificate renewals, and production incident resolution to ensure reliable event-driven processing.
- Optimized AI-assisted development and automated data validation workflows using GitHub Copilot, reducing development effort by approximately 25% and improving test coverage by 20%.
- Collaborated with cross-functional engineering and operations teams to mitigate large-scale events, maintaining customer availability during high-traffic periods across distributed retail systems.
- Improved database query performance by 40% through index optimization and aggregation pipeline enhancements, accelerating report generation and application response times.

JPMorgan Chase & Co. — San Jose, CA
Software Engineer — October 2024 – February 2025

- Streamlined React components through memoization and code-splitting techniques, reducing application bundle size by 10% and enhancing frontend performance for financial services applications.
- Architected Java Spring Boot REST APIs integrated with AWS Relational Database Service, enabling reliable, real-time data delivery to client applications supporting banking operations.
- Established 17 metric dashboards to monitor system health, availability, downtime, and cross-replica consistency, strengthening operational visibility across distributed services.

[24]7.ai Bangalore, India
Software Development Engineer November 2021 – December 2022

- Refined the Answers conversational AI platform by incorporating customer-entered keywords into chatbot response logic, reducing support inquiries by 20% and improving customer satisfaction.
- Coordinated with cross-functional product, engineering, and customer experience teams to prioritize platform enhancements, strengthening user engagement and conversational performance.
- Integrated machine learning algorithms into chatbot workflows to improve response accuracy, enhance intent recognition, and deliver more relevant automated customer support.
- Validated application functionality through unit and integration testing with Spring Boot Test and Mockito, establishing 25% code coverage and helping reduce production defects.
- Strengthened backend application reliability by applying Java, Spring Boot, and automated testing practices to conversational AI services, improving maintainability and supporting consistent platform performance.

KPIT Technologies Pune, India
Associate Software Developer December 2019 – October 2021

- Crafted reusable React components using hooks and functional programming principles, reducing frontend development time by 10% and improving code reusability.
- Streamlined application deployment through AWS Elastic Beanstalk and CI/CD pipelines, accelerating release cycles by 30% and improving deployment consistency.
- Reengineered GraphQL data-fetching operations to minimize unnecessary data transfers, enhancing application responsiveness and optimizing client-server communication.
- Spearheaded the development of scalable web applications by coordinating frontend and backend integration activities, improving interoperability between application components and cloud services.
- Integrated Spring Framework-based REST API clients with cloud services, leveraging React, GraphQL, and AWS technologies to strengthen application connectivity and streamline data exchange.

EDUCATION

Master of Science in Computer Science
University of Memphis, Memphis, Tennessee, USA January 2023 – July 2024

Bachelor of Technology in Information Technology
Anurag Group of Institutions, Ghatkesar, India June 2016 – May 2020
